

# FEDUST

NO DUST

- Cobweb Cleaning
- Machine Cleaning
- Rust Removal
- Deburring
- Metal polishing
- Stain Cleaning
- Degreasing
- Die/Mould Cleaning

## Cobweb / Dust Cleaning

### Deep Cleaning

Cobweb and dust cleaning activity is carried out using our proprietary product Hi-Clean machine. This machine can reach beyond 40 ft. of high-rise ceilings from the floor.

### High Safety

It is a safe product as the operator stands firmly on the ground and does high-rise cleaning

### Dust Collection

In this process, we vacuum the ceiling using high power vacuum machine and ensure there is no spillage or scattering of dust. The dust is collected in the bins.

### No Production hindrance

There is no involvement of height equipments like boom lift, scaffold and scissor lift. Hence there is no production hindrance

### High Efficiency

Using this machine, we achieve high efficiency with less manpower and more coverage area.

# Machine Cleaning

BEFORE

AFTER

- Rust, stain, oil and grease deposits on the machines are cleaned effectively and the original base of the machines are retained
- Cleaning is carried out using customised bio-degradable chemicals, power tools, steam and blasting technologies
- Benefits include the increase of machine life and working condition

## Stain Cleaning / Degreasing

- Stain removal activity is done by our innovative technology involving high-pressure steam, scrubbing brushes, bio-degradable chemicals, blasting mechanism etc.

BEFORE

AFTER

- This activity is carried out on metal sheet buildings, floors, machines etc. to prevent corrosion
- This eliminates the painting process, replacement cost and increases lifetime of the material

# Rust Removal /Deburring / Metal Polishing

## Rust Removal

It prevents metal sheets & components from further corrosion. Also increases the lifetime and saves the complete replacement cost.

It is done using brushes and chemicals.

## Die/ Mould cleaning:

Increases the quality of mould product. It is done by using various blasting techniques and power tools with utmost precision

## Metal Finishing:

Deburring and Polishing operations helps to achieve perfect finish and accuracy of metal components. It is done using brushes, buffing wheels, blasting methods etc.
