High Rise Cobweb and Dust Cleaning Services

Are you tired of those hard-to-reach cobwebs and dust that make your facility look untidy and unproductive? At Foedust Cleaning Services, we specialize in cobweb and dust cleaning at high rise ceiling with our innovative technology for factories and warehouses, providing you with a clean and safe environment to enhance productivity. Say goodbye to the inconvenience and risks of cleaning at heights!

High Level Cleaning System

Our high-rise cleaning machine, is an innovative product. With this machine we can clean 50 ft height ceiling in factory shop from the ground. We vacuum the ceiling with our light weight pole from ground. Our high level cleaning system allows us to work in small spaces between machines and equipment, making sure no cobweb is left behind. The 50 ft pole weighs less than a kg. Height accessories like boom lift ,scaffold etc.not required

Benefits:

- Employee Safety
- Reformed air quality
- Enhance productivity
- Improve lighting
- No Production hindrance
- Cost Effective
- No Dust scattering
- High Quality cleaning
- Pest control

Safety:

Our product is a safety product in first place, because a person need not go physically up to 50 ft height to do the cleaning like in traditional method. In our cleaning system all high rise cleaning is done from ground.

Cobwebs traps suspended dusts, increasing the risk of dust explosion significantly increasing a fire risk. With machinery generating heat and sparks, the presence of cobwebs near electrical components and equipment increases the likelihood of fires

Comparison:

Sno	Conventional method	Foedust High rise Cleaning
1	Scattering of dust. Dust will fall to ground and above the machine. Dust revolves inside	Vacuuming of ceiling. Dust is collected in bin. No dust falls to ground.
2	Height accessories required like boom lift and scaffold it will occupy more area. It cannot go inside cramped spaces	Don't required height accessories. Less space will be occupied.
3	It will be production hindrance, because heavy machinery is required	No production hindrance. So activity can be carried during production hours. Need not wait for production shut down
4	Not safe, since man needs to go physically up using height accessories	Safety product because we work from ground
5	Air quality is poor because the cobweb traps dust. And in this method cobweb is not removed but scattered instead and it revolves inside	Increase in air quality since we collect it.
